PROFESSIONAL SUMMARY

Python Developer with 4+ years of experience building scalable backend systems, microservices, and fullstack web applications. Expert in FastAPI, Flask, Django, event-driven architectures (Kafka, Airflow) and cloud platforms (AWS, Azure), consistently delivering highthroughput services and reducing latency.

EXPERIENCE

Software Developer

May 2025 – Present

63 Moons Technologies • Full Time

- Led development of a subscription-management microservice (FastAPI, PostgreSQL, Docker) that orchestrates Razorpay, Google Play and Apple App Store lifecycles, handling thousands of daily transactions with idempotent event publishing to Kafka.
- Engineered a multichannel notification service consuming Airflow-generated Kafka events and delivering email, WhatsApp, and push notifications at-least-once with RSA-2048 decryption and secret-masked logging, processing hundreds of messages per month.
- Designed and deployed an end-to-end judicial data pipeline (Airflow, Kafka, Redis, PostgreSQL) that scrapes and syncs >100k Indian court case records periodically with fault-tolerant retries.
- Built a realtime collaborative Contract Lifecycle Management platform using FastAPI, Yjs CRDT over WebSockets, Keycloak JWT auth and Redis state persistence, reducing contract turnaround time by 30%.
- Implemented a Keycloak-driven user management service with Sinch WhatsApp OTP login, encrypted contact storage and automated subscription plan allocation, cutting B2C onboarding time by 40%.

Jr. Python Developer

Jul 2024 – Apr 2025

Psych X86 Technologies • Full Time

- Optimized Advantus backend (FlaskRESTful, PostgreSQL COPY bulk inserts, materialized views) to reduce audience retrieval and insertion times by ~40%.
- Designed and built the Journey Builder BPMN microservice platform (FastAPI, asyncpg, JWT, Kafka, Airflow) enabling scalable realtime workflow execution and monitoring.
- Developed Django REST Framework APIs for Wishmasters, integrating PhonePe payments and admin coupon/reward management, improving transaction reliability and cutting manual processing time.
- Created a FlaskRESTful admission form backend for Dypatil, integrating PayUmoney and third-party CRM APIs, deployed on AWS EC2/Nginx with 99.9% uptime.
- Authored CI/CD Docker configurations and used SupervisorD for process supervision across projects, accelerating deployment cycles by ~30%.

Full Stack Python Developer

Jun 2022 – Jul 2024

PCE / Maharashtra Police • Freelance

- Delivered three fullstack applications using Flask, Material Dashboard, SQLAlchemy and WTForms, achieving highavailability production deployments.
- Implemented complex business algorithms and optimized database queries, improving response times by up to 25%.

- Managed production servers with proactive monitoring, maintaining >99.5% uptime across all client portals.

Cloud/DevOps Architect

Dec 2023 – Mar 2024

TCIA Global Pvt. Ltd. • Intern

- Automated Azure environment provisioning with ARM templates and Azure CLI, reducing VM setup time by 70%.
- Contributed to a Flaskbased fullstack web app, integrating CI pipelines and containerization.

PROJECTS

QiWatch Subscription Service

Python 3.12 • FastAPI • Uvicorn • PostgreSQL • SQLAlchemy • Kafka • Docker

- Built a subscription management microservice (FastAPI, PostgreSQL, Docker) that orchestrates Razorpay, Google Play and Apple App Store lifecycles and emits domain events to Kafka.
- Implemented layered architecture, idempotent webhook handling and background reconciliation workers, enabling zero-downtime scaling for thousands of daily subscriptions.

QiWatch Notification Service

Python 3.12 • FastAPI • Kafka • PostgreSQL • Docker • Gmail API • Sinch Engage • FCM

- Developed a microservice that consumes Airflow-generated Kafka events and dispatches email, WhatsApp and push notifications with at-least-once delivery guarantees.
- Implemented RSA2048 decryption of PII, secret-masked structured logging and a registry-based renderer pattern for extensible notification channels.

Advantus

advantus.io/

FlaskRESTful • PostgreSQL • Kafka • Airflow • Docker

- Optimized backend audience verification logic and introduced bulk COPY inserts, materialized views and strategic indexing, cutting data ingestion time by 40%.
- Streamlined Dockerfile builds, reducing image size and build time, which accelerated CI pipelines.

Journey Builder

FastAPI • Uvicorn • Kafka • Asyncpg • PostgreSQL • Airflow

- Designed a BPMNbased microservice platform for workflow management, delivering realtime process execution via FastAPI and asyncpg.
- Integrated Kafka and PostgreSQL listen/notify for high-performance inter-service communication.

Qilegal Judicial Microservice

qilegal.com/

FastAPI • Celery • Redis • Kafka • Python

- Implemented a FastAPI service aggregating data from multiple Indian court websites using Celery and Redis for parallel imports.
- Leveraged Kafka to capture failed requests and enable reliable retry mechanisms.

QiLegal Data Pipeline

qilegal.com/

Apache Airflow • Kafka • Redis • PostgreSQL • Python 3.12 • Docker • AWS Load Balancers

- Engineered an end-to-end pipeline (Airflow, Kafka, Redis, PostgreSQL) that scrapes and synchronizes Indian court case data at scale, processing >100k records periodically.
- Implemented faulttolerant retry logic and parallel processing, achieving nearrealtime data freshness.

Contract Lifecycle Management

qilegal.com/

FastAPI · Uvicorn · Yjs · WebSockets · Keycloak · Redis · PostgreSQL

- Created a FastAPI REST API and realtime collaborative editing platform using Yjs CRDT over WebSockets for multitenant contract authoring.
- Integrated Keycloak JWT authentication with JWKS caching and Redis-backed state persistence, improving collaboration latency by 35%.

Ekamed

ekamed.in/

Python · AWS Lambda · API Gateway · Terraform · PostgreSQL · S3 · Cognito · Verified Permissions

- Designed a multitenant serverless hospital management SaaS platform on AWS Lambda and API Gateway, provisioning org-specific resources via Terraform in under 3 minutes.
- Built ~12 microservices covering patient, appointment, billing and AI modules, achieving consistent request latency <200 ms and rowlevel security via JWT claims.

Media Flagger

Python · Flask · TensorFlow · CNN · GloVe

- Developed a Flask web app that classifies media files with a CNN model and GloVe embeddings, enabling multilabel tagging for large media libraries.
- Optimized inference pipeline to handle 200+ files per minute with GPU acceleration.

Attendance System

Python · OpenCV · Tkinter

- Built an automated attendance system using OpenCV facial recognition and a Tkinter GUI, reducing manual entry errors by 90%.
- Implemented a local SQLite backend for secure storage of attendance records.
